

L8 Trust in Multiagent Systems

Ontology-Based Service Representation

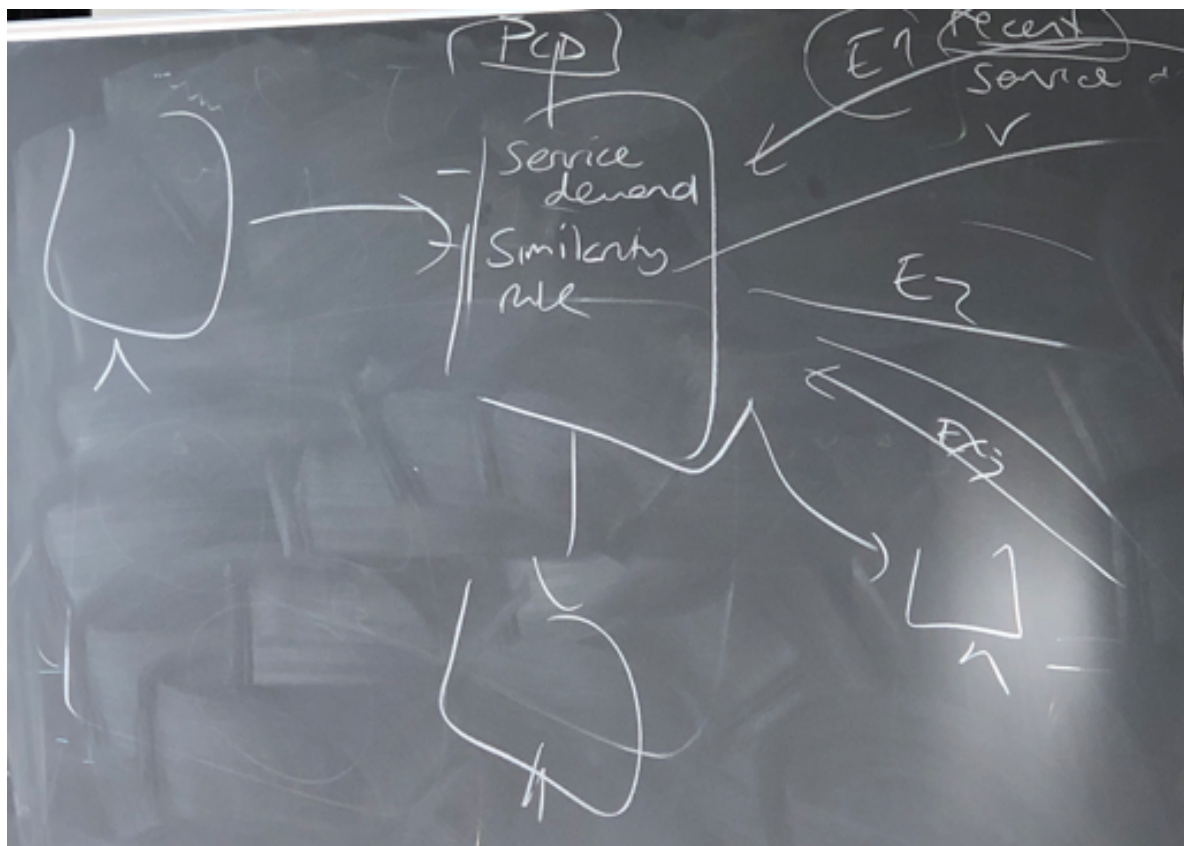

Classifications's main point - use my current service demand to predict how much is every service provider (SP) going to satisfy my need based on the experience (E)

Four Approaches Compared
(experience related on the left / ratings-based on the right)

Simulation Factors

(Pcd)

(Rsubj)

The lower the subjectivity, the more homogeneous. The higher the subjectivity, the higher the heterogenous.
